

Total Intravenous Anaesthesia Sets

A secure and safe TIVA line, every time.

TT202E

Why Choose Tivatek?

Absolute focus on creating a gold standard in Total Intravenous Anaesthesia, TIVA

Our motivation is to create an advanced range of TIVA products following guidelines from the Safe Anaesthesia Liaison Group (2009). We pride ourselves on exceptional manufacturing standards for a range of TIVA sets you can rely on. We aim to offer an all in one solution to make delivery of TIVA as safe as possible.

1

Anti reflux valve on side arm for infusion of gravity fed IV solutions and anti siphon/anti reflux valves on drug lines (to prevent free-flow and back-flow) for the syringe pumps included.

2

Microbore tubing used in all Tivatek™ kits ensures a low priming volume and reduces drug wastage.

3

Anti-kink bridge as additional safety feature.

4

High specification kink resistant tubing offers a reduced risk of occlusion.
